Breaking News: ARM5 Sets New Performance Records

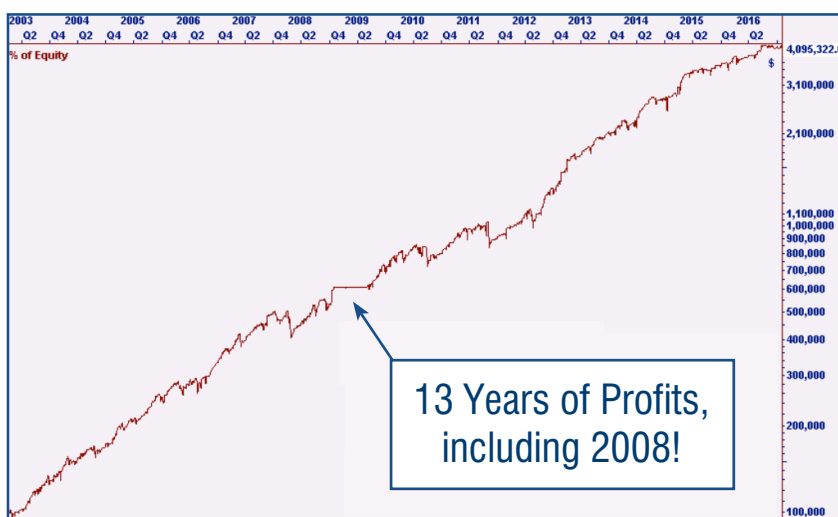

“After many months of work, applying and enhancing our Artificial Intelligence technology, or AI,

ARM5 has finally been released!

This incredible new platform has already made it possible for us to build several outstanding new Strategies, including the one shown on this page. Using the powerful new features in ARM5, this Strategy has dramatically out-performed the market for the past 13 years, making an incredible 30% per year.

And this is just the beginning! I have personally applied this technology to create an improved Secret Sauce Strategy as well as an ARM5 Liquid Stocks Strategy, the first one I've seen showing 85% Forward Test profitability!

It is important to note that ARM5 wasn't built overnight. It's the result of years of steady improvements to our A.I. technology in the Nirvana Club.

With an average annual profit of 30% per year for 13 years, this new ARM5 Strategy beats the market by a very wide margin.

The Strategy is now available to current Nirvana Club Members.

D

This year, we focused our attention on the Genetic Algorithm, or “G.A.”. The G.A. is a computer algorithm that can find profitable patterns in enormous amounts of data. The Nirvana Club web site has a good description of how it works. The G.A. Strategy Block in OmniTrader (and VisualTrader), is capable of **Generating Signals OR Filtering Signals** depending on how it is used.

For the Strategy shown on this page, the G.A. was set to create Signals using Relative Momentum, Position above/below key Moving Averages, and 46 other “Inputs”. The great thing is, we don’t have to know how to combine the Inputs to find good Signals. That is what the G.A. does and it has worked great since it was first developed as part of our Nirvana Club research. Now, it’s time for the “Next Generation...”

Achieving Unprecedented Accuracy & Profits

Creating a Mechanical Strategy that is 70% accurate is not easy, unless you have ARM5!

I personally trained a Knowledge Base, using the G.A., on 20 very liquid stocks and was able to get out-of-sample, forward test accuracy of 85%. Then, I applied this Knowledge Base to a new list of 300 stocks, which shows nearly 75% accuracy on this expanded list. A Portfolio Simulation and recent trade list is shown to the right.

This G.A. is available to Club Members now. Our next step is to TRAIN on a large symbol list, so it can find more opportunities. A Knowledge Base can take several days to “cook”, and we expect to release the updated version within a few days of this newsletter.

Several key improvements were developed and tested to improve the G.A. in 2016, including:

- Incremental Training
- Uniqueness of Rules
- Technical Filters
- Group-Based G.A.'s
- Boolean Inputs
- And more...

These improvements are described on the Club web site, but one of the most important ones was “Incremental Training”, a concept that is illustrated to the right.

This chart illustrates the Incremental Training process.

When Incremental Training is applied, the program uses individual TRAINING Periods to create a set of rules for the next TRADING Period. In this way, all trades are generated in “Out of Sample” data. The Strategy shown on page 1 was built using Incremental Training, so the 30% annual gain was generated in “Out of Sample” data. That is, every trade shown in the chart would have been seen the day it was generated.

By restricting training to only occur in Trending Zones, the resulting Knowledge Base will be much more robust – finding trading opportunities when this specific condition exists.

Another important feature we added to the G.A. is the concept of Filters. For example, the G.A. can use a Trend Filter that MUST be true for a Rule to be identified.

When this Filter is added to the G.A., Rules will only be generated when the Trending Filter is True. This forces the G.A. to build a Knowledge Base using this concept, resulting in a much better and more accurate rule set.

The Filter concept was used for the Strategy shown on Page 1.

Learn More About The Nirvana Club

Visit our Nirvana Club web site* to learn more about what the Club has to offer. On the site, you will discover:

- The History of our ARM Technology
- How ARM5 generates superior Signals using A.I.
- 3 Different A.I. Strategy Products Members can use
- Additional Power Tools for Members Only
- Many Member Testimonials
- A List of Member Benefits
- The Ultimate Trading Machine Mission
- Pricing Levels & How to Join

Strategy Sharing

NEW for 2016! A few years ago, we provided a “zip” facility so members could combine indicators, strategies, and profiles AND upload them to the site.

We just dramatically improved on this idea with a NEW Strategy Upload/Download app in OmniTrader.

Now, members can download the latest ARM5 Strategies that other members have created, add their own ideas and upload them again!

This key advancement is going to propel The Nirvana Club into a new era of prosperity.

NEW Member Benefits

- OmniTrader Professional. Automate your ARM5 Strategies in OmniPilot
- Limited Time Offer for New Members. VisualTrader Professional, with the Trade Equalizer, and automatic Market State adjustments.
- NSP Series Strategies, including NSP-31 and NSP-41, profitable every year since release.
- FREE ACCESS to ARM-powered Strategies and Indicators in OmniVest and OmniFunds
- 50% discounts on ALL Nirvana Software Products, 40% on Education and 30% on Data!
- Nirvana Club BASH Meetings and more.

Now is The Time to Join!
